#### Understanding and Comparing Fractions

The word *fraction* means “part of a whole.” The word comes from the Latin word *fractio*, meaning “to break into pieces.” In math, a fraction means one or more parts of a whole.

*Example:*

A fraction has two parts, a *denominator* and a *numerator*. The denominator is the numeral written under the bar and tells the number of parts a whole is divided into. The numerator is the numeral written above the bar. The numerator tells the number of parts of the whole that are being counted.

<b>numerator</b>	<b>number of parts counted</b>	<b>1</b>
-----	-----	-----
<b>denominator</b>	<b>total parts of the whole</b>	<b>17</b>
