Recommendations

Microsoft Movie Maker for Windows users, and Apple iMovie for Mac users are probably the two easiest to use free video editing software programs available. Both products will allow you to very quickly perform simple video editing tasks.

- **The New Windows Live Movie Maker 2011 supports most files now including MP4.**

Adding Music to Your Video Project

- You can add music and sounds to your video project to make it more realistic or to make it more entertaining.
- It's easy to do, but you need to be aware of copyright laws.

What Are the Issues?

- Playing music is often allowed for educational purposes; however background music to a video is **not** considered educational use.
- Posting a video with music you do not have permission to use to YouTube is a copyright violation.
- Even if you have legally purchased music for personal use, it is still a copyright violation to use it in a video on YouTube.

What Are Some Solutions?

- You are allowed to use up to 30 seconds from a song.
- You can request permission (especially if you are using music from a northern musician). Ask them if you can use their music in your video.
- You can use royalty free sites for your background music.

Wallpaper
Genre: Contemporary
Length: 3:35
Instruments: Synths, Kit, Guitar
Tempo: 92

Very very clean mix that is non-offensive on almost all fronts. Good spectral distribution - nice lows and highs. 2 catchy synth lines sort of fight for attention, leaving you to ignore them both after a while.

Windswept
Genre: Contemporary
Length: 3:28
Instruments: Guitar, Strings
Tempo: 79

A relaxed guitar and strings piece for the denouement of a story or exposition of the scenic outdoors. The guitar is peaceful as the strings gently build in prominence. The tempo is regular overall, but slows down in key moments to build a sense of tranquility. 017
