EXECUTIVE SUMMARY

- To examine perceptions surrounding “Essential Skills” in the workplace, EKOS conducted a survey with 1,500 interviews with employers in Canada. A sample of this size has a margin of error of +/-2.5 per cent for the sample overall at a 95 per cent confidence interval (i.e., 19 times out of 20). This sample size permits profiling of sub-group results and differences based on a number of organizational characteristics (e.g., size, region, sector). The surveys were conducted during February and March, 2007.

Awareness

- Awareness of the term “Essential Skills” seems high with nearly four in ten saying they are very familiar. On the other hand, a large majority of employers who are familiar with the term believe that it is most accurately defined as the minimum skill set needed for a specific position.
- Employers cite skills that are specific to their respective jobs as being the top example of Essential Skills in their workplace. Considerably fewer believe it to be a common set of transferable skills required for any job.

Importance

- Oral communication and working with others are the top-rated skills among employers.
- However, when examining what employers in relation to the level of employees’ skills in the workplace, we find the largest gap in the area of “thinking skills”.
- Nine in ten employers say that “Essential Skills” are very important for improving customer satisfaction, the overall success of the organization and improving the productivity of employees.

Implications

- In an open-ended question, employers cite a variety of implications of having low skills. “Poor customer relations” is listed as the top implication although by only a slim margin.
- Improved productivity, customer relations and increased sales/revenue are seen as the top benefits to having employees with strong Essential Skills.
- When asked to rate a series of potential implications, lower productivity and the inability to do a range of tasks are listed as the top two mentions (although they lead by only a slim margin). The inability to diversify and not being able to keep up with technology receive significantly lower ratings than all of the options tested.

Training

- Informal training is more prevalent than formal training, although majorities of employers rate both as being a high priority.
- Employees have received the most training in working with others and oral communication (which were listed as the two most important types of skills in a previous question).
- On the job training is by far the most frequently used method of receiving Essential Skills training.
- Training is most often used to improve productivity in an organization.
- Almost equal majorities of employers say that the outcomes were measured in terms of employee satisfaction and performance, client satisfaction and performance of the organization as a whole.
- Organizations that choose to not offer Essential Skills training do not do so either because these skills are a job requirement or are not required on the job.
- Most employers say that their organization does not plan to offer Essential Skills training.
- The single greatest barrier to furthering the development of employees' Essential Skills is the lack of time.
- Most employers have youth employees but only roughly two in ten each have employees who are Aboriginal or recent immigrants. Of these three groups, youth receive the highest amount of training in Essential Skills.

1. INTRODUCTION

1.1 BACKGROUND AND OBJECTIVES

a) Background

Since the early 1990s, researchers in Canada and in other countries have examined and described the core skills that are used by people in day-to-day life and in their work. In Canada, the Essential Skills Research Project (ESRP) was established in 1994. This project resulted in the identification of nine Essential Skills – a set of transferable skills common across most occupations and used in daily life. The nine Essential Skills are:

- **Reading text.** Reading materials in the form of sentences or paragraphs.
- **Document use.** Tasks that involve a variety of information displays in which words, numbers, symbols and other visual characteristics (e.g., lines, colours or shapes) are given meaning by their spatial arrangement.
- **Numeracy.** Using numbers and thinking in quantitative terms to complete tasks.
- **Writing.** Writing text and writing in documents, such as filling in forms, and non-paper-based writing such as typing on a computer.
- **Oral communication.** Using speech to give and exchange thoughts and information.
- **Working with others.** Employees working with others to carry out their tasks.
- **Thinking skills** (including problem solving, decision making, critical thinking, job task planning and organizing, and significant use of memory and finding information). The process of evaluating ideas or information to reach a rational decision.
- **Computer use.** Using different kinds of computer applications and other related technical tools.
- **Continuous learning.** Workers participating in an ongoing process of acquiring skills and knowledge.

In addition to the identification of Essential Skills, the ESRP has also developed a series of occupational profiles (about 200) which describe how Essential Skills are used in different jobs and at what level of complexity. Authentic Workplace Materials (materials such as forms, tables) have also been collected to illustrate how workers use Essential Skills.

b) Objectives

Human Resources and Social Development Canada's Workplace Skills Branch manages the Essential Skills Initiative the goal of which is to improve the Essential Skills levels of Canadians entering or in the labour market by optimizing participation, facilitating transitions and improving productivity in the workplace. ESI does this through the following means: conducting research that will expand the knowledge base on Essential Skills; increasing awareness and understanding of Essential Skills; building capacity among stakeholders to integrate Essential Skills into workplace training and human resources practices; and providing contributions funding to support the development of workplace tools and applications.

This quantitative survey aims to provide HRSDC with statistically reliable quantitative data related to various issues surrounding "Essential Skills" in Canadian workplaces. Some of the key issues examined in this report include awareness and perceived importance of "Essential Skills", the extent of employee participation and organization investment in Essential Skills training, barriers to investing in Essential Skills training and organizational characteristics as they relate to Essential Skills in the workplace.

1.2 METHODOLOGY

To examine perceptions surrounding "Essential Skills" in the workplace, EKOS conducted a survey with 1,500 interviews with employers in Canada. A sample of this size has a margin of error of +/- 2.5 per cent for the sample overall at a 95 per cent confidence interval (i.e., 19 times out of 20). This sample size permits profiling of sub-group results and differences based on a number of organizational characteristics (e.g., size, region, sector). The surveys were conducted between February 15 and March 16, 2007.

The sample was drawn from randomly selected businesses across Canada. Care was taken in the selection of the responding individual within the contacted organization. For smaller firms, the owner/operator of the establishment was interviewed. For larger firms, a screening question was carefully crafted to identify the most senior individual within the contacted location who was responsible for human resource decisions and personnel matters within the firm.

Prior to the interviewing period, the questionnaire went through a round of pre-testing in early February, 2007 with a total of 30 respondents (in both official languages). The test was conducted in order to gauge the flow and clarity of the survey instrument. Before the final survey was fielded a small number of revisions were made to the survey instrument in close consultation with the client. The post test revisions were made in order to clarify certain questions and to adjust the focus of others questions. The full survey questionnaire can be found in Appendix A.

Fieldwork for this project was conducted by highly trained interviewers at EKOS' call centres in Ottawa and Edmonton. Throughout the data collection, survey supervisors continuously monitored interviewing to ensure consistency of questionnaire administration and interviewing techniques. Up to eight

call-backs were made to each member of the sample for which initial attempts at contact were unsuccessful. Follow-up calls were made on subsequent days, at varying time periods to maximize the potential for reaching a respondent. Appointments were made for respondents wishing to reschedule a survey. Daily electronic records were kept of all calls made, whether successful (i.e. interviews completed or appointments made) or not.

Once the survey collection was completed, data were reviewed for the purposes of coding open-ended responses and general cleaning (e.g., based on skip patterns and for unusual outliers). The overall survey results were weighted in the analysis to reflect population proportions in terms of region and business size.

Table 1: Overall Sample Characteristics

	Percentage	Sample Size	Margin of Error (%)

Yes	13%	199	7.0
No	87%	1,302	2.7

2. AWARENESS/PERCEIVED IMPORTANCE OF ESSENTIAL SKILLS

2.1 AWARENESS

The term “Essential Skills” seems problematic. Roughly three-quarters of employers (77 per cent) say that they are at least somewhat familiar with the term “Essential Skills” with nearly four in ten (39 per cent) saying that they are very familiar with the term. Nearly one-quarter of employers (23 per cent) are not familiar with the term at all.

On the other hand, as a follow-up question, employers were asked to define the term “Essential Skills”. The large majority of employers (76 per cent) believe that the term refers to the minimum skill set that is necessary for a specific position. In fact, it is only a relatively small minority of less than two in ten (17 per cent) that believe the term refers to basic or transferable skills. So, although almost half believe that they know what the term means, only in six really do understand the term as it has been defined by the Government of Canada. Further, respondents that understand Essential Skills to be common, transferable skills are no more likely than others to say that they are familiar with the term

Familiarity with Essential Skills

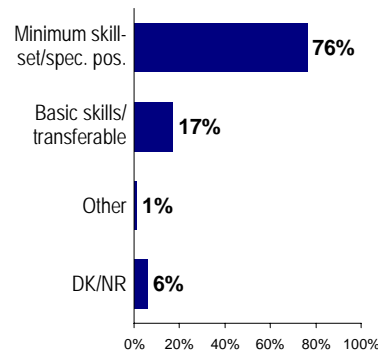

“To what extent are you familiar with the term Essential Skills? Would you say you are very familiar, somewhat, or not at all?”

■ Not at all familiar
■ Somewhat familiar
■ Very familiar

n=1501

“What do you consider to be the meaning of the term Essential Skills?”

n=1256

Looking at the results for familiarity with the term “Essential Skills” by demographic subgroup we find that:

- Quebec firms are significantly more likely to say that they are familiar with the term “Essential Skills” (93 per cent familiar overall; 62 per cent very familiar) than is the case in the rest of the country. Perceived familiarity is notably lower in BC and Alberta with roughly one-third each (34 and 33 per cent, respectively) saying they are not at all familiar with the term.
- Claimed familiarity with the term is higher in businesses with multiple locations across Canada and tends to increase with business size. The term also has more resonance among public sector employers (that also tend to be larger) than among their private sector counterparts.
- Familiarity is understandably higher in organizations that place a high priority on training than among those that do not. High levels of familiarity also tend to increase with the size of an employer’s organization.

In terms of identifying the specific meaning of the term, we find some significant demographic variations:

- Employers in Ontario (81 per cent) are more likely to say that “Essential Skills” refer to the minimum skills necessary for a specific position. BC employers (30 per cent) are almost twice as likely as average to say the term refers to basic/transferable skills. So, although organizations in BC are less apt to think they understand the term, in fact, they are more apt to have a common understanding of it with the federal government.
- Employers in businesses with one location in Canada are more likely than those with multiple locations to believe the term refers to the minimum skills necessary for a specific position.
- In terms of the industry in which employers work, we find that those in social services and scientific/technical areas are more likely than average to cite the minimum skills necessary for a specific position, while those in retail are more apt to say that it refers to basic/transferable skills.

After being offered a common definition of Essential Skills (as commonly used, transferable skills), employers were asked to delineate which skills they thought were “Essential Skills” for their own workplace. More than one-third of employers refer to skills that are specific to their particular job (37 per cent), while roughly one-quarter each mention oral communication (26 per cent) and working with others (23 per cent). Two in ten say that self-motivation (21 per cent) is an “essential skill”, and slightly less than two in ten each say computer use (17 per cent), customer service skills (16 per cent) and thinking skills (16 per cent) are “Essential Skills” in their workplace. Numeracy/math is seen as essential to 13 per cent of employers. All other responses are given by ten per cent of employers or less.

Perception of Essential Skills [Unprompted]

“Thinking of your own workplace, what kinds of skills do you consider to be Essential Skills?”

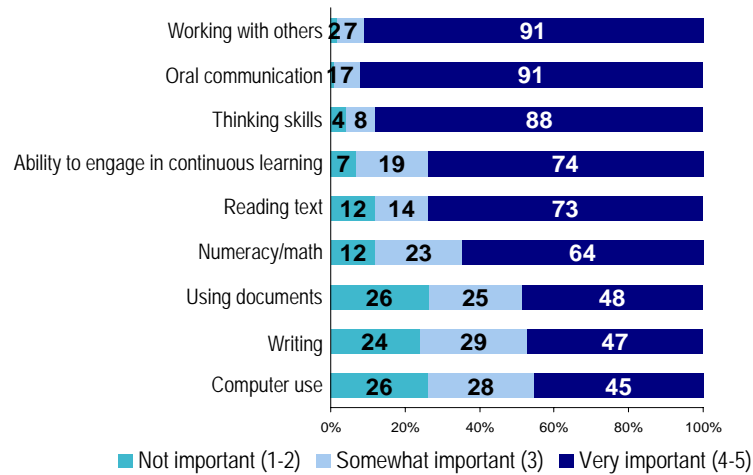

- Regionally, job specific skills are much more prevalent in Atlantic Canada (51 per cent) and Alberta (46 per cent). Employers in Ontario are more likely to say that working with others is an essential skill in their workplace (31 per cent).
- Public sector employers tend to score higher than average for several key skills, specifically, public sector employers rate computer use, continuous learning, oral communication and reading and writing.
- Employers in the construction and manufacturing sectors rate job-specific skills higher than average while those working in social services and scientific/technical areas rate oral communication and self-motivation higher than average.
- Job-specific skills rate slightly higher among those who do not place a high priority on training and are not familiar with the term Essential Skills.

2.2 IMPORTANCE

Employers were asked to rate a series of skills both in terms of their importance and in terms of the level of their employees' skills in each area. Oral communication (91 per cent saying "very important") and working with others (91 per cent) are seen by employers as the two most important skills for their employees to have. A slightly smaller number of employers rate thinking skills (88 per cent) highly. Reading text (73 per cent) and the ability to engage in continuous learning (74 per cent) are both seen as important skills by roughly three-quarters of employers. Numeracy and math (64 per cent) are seen as important by two-thirds of employers. Other skills were rated as important by less than half of employers.

Importance of Specific Skills

"How important is it that the employees have skills in...?"

In addition to rating the various areas in terms of relative importance, employers were also asked to rate the level of their employees' skills in these key areas. Employees are ranked highest for the skills that employers also deem to be the most important. Large majorities of employers rate employees highly on working with others (86 per cent) and for their oral communication skills (77 per cent). Nearly equal majorities of employers rate their employees highly on their skills in reading text (68 per cent), thinking (65 per cent) and continuous learning skills (64 per cent). Slightly more than one half (54 per cent) of employers rate their employees highly for their numeracy/math skills while, in all other areas, employees receive a lower than majority rating.

Rating of Specific Skills

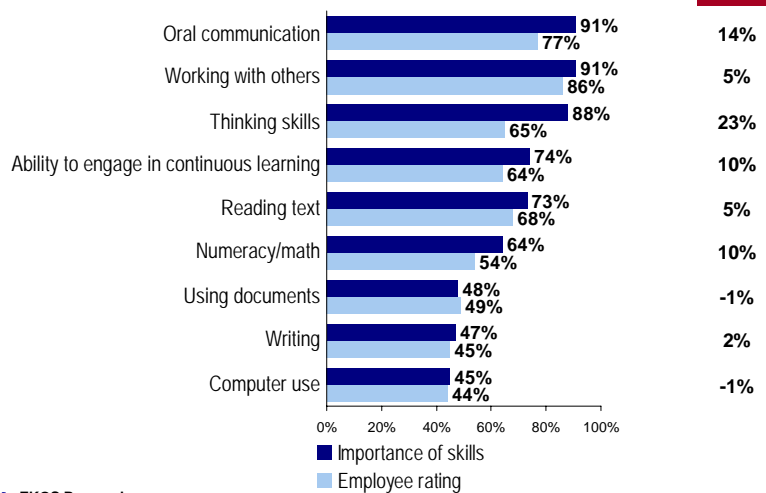

"How would you rate the level of employees' skills in...?"

Results for the importance of these skills were mapped against the rating of the skills of employees in the analysis for the purposes of understanding where the greatest gaps lie. With the exception of the three least important items, there is a gap of five per cent or more for each of the items tested. The largest gap, by a significant margin, is found with employees' thinking skills (23 per cent difference), whereby the perceived importance outstrips the actual skill level rated by employers by a fair margin. Oral communication (the most important skill for employers) also shows a large gap (14 per cent), with skill levels falling quite a bit short of where employers might like them to be, given the importance they place on them. Numeracy and math, while less important than some other skills, nonetheless show a significant gap at 10 per cent.

Importance and Rating of Specific Skills

"How important is it that the employees have skills in.../
How would you rate the level of employees' skills in...?"

n=1501

% high (4-5)

Essential Skills in Canadian Workplaces, 2007

- Regionally, employers in Atlantic Canada are significantly less likely than average to say that oral communication is very important (81 per cent). Atlantic employers are also more likely to value reading text (81 per cent) as are employers in BC (83 per cent) and Ontario (83 per cent). Employers in the Prairies are more likely than average to say that thinking and writing skills are important (95 per cent). Employers in Quebec value writing (34 per cent) and numeracy/math skills (46 per cent) least among all regions.
- Private sector employers are more likely than those in the public sector to rate reading text and numeracy/math as being highly important. Private sector employers are also more than twice as likely as those in the public sector to say that computer use is not important. Public sector employers tend to place a higher than average value on thinking skills and writing.
- As might be expected, employers who place a priority on training, rank each of the items higher in importance than those who do not.

- Looking at industry sectors, those in the social services and scientific/technical fields rank thinking skills higher than those in other sectors while those in the financial field are more likely to rate reading text, using documents and numeracy/math higher than other sectors. Writing is rated highest in financial, social services, and scientific/technical sectors.
- When rating the skills of their employees, Atlantic employers provide higher than average ratings for reading text (81 per cent), numeracy/math (68 per cent), writing (60 per cent) and thinking skills (78 per cent).
- High ratings tend to decrease for many of the skills on the list. Oral communication, working with others, thinking skills, reading text and numeracy/math all have a tendency to decrease with the size of a company in terms of high ratings for an organization's employees.
- Similar to the findings in the previous question on importance, those who place a priority on training, rate their employees' skills higher in each of the key areas than those who do not.
- Reading text and oral communication are rated higher by those in financial, social services and scientific/technical sectors. Employers in the social services and scientific/technical sectors are also more likely to rate their employee's abilities in computer use, working with others and continuous learning higher than other sectors. Employers in financial industries are much more likely to rate their employees highly on using documents and writing.

“Essential Skills” are seen as very important in four key organizational areas by employers across Canada. In fact, slightly more than nine in ten employers say that “Essential Skills” are very important for improving customer satisfaction (95 per cent), the overall success of the organization (93 per cent) and improving the productivity of employees (91 per cent). A smaller number, although still a large majority, cites Essential Skills as being very important in adapting to organizational or cultural change (77 per cent).

Implications of Good Essential Skills

n=1501

Essential Skills in Canadian Workplaces, 2007

- Regionally, importance ratings are consistently high for improving customer satisfaction, the overall success of the organization and improving the productivity of employees. Employers in the Atlantic (84 per cent) tend to place a higher importance rating on the role of good “Essential Skills” in adapting to organizational or cultural change.
- The role of good Essential Skills in adapting to organizational or cultural change is seen as very important among organizations with multiple locations and tends to increase in importance with the size of an organization.
- As might be expected, for each of the areas tested, those who set a priority on training are more likely to say that good Essential Skills training is important.
- The tendency to say that good Essential Skills are very important to adapting to organizational/cultural change increases with the size of an organization.

2.3 IMPLICATIONS

Employers across Canada cite a number of cost implications of not having employees' "Essential Skills" be up to their requirements. Nearly one-quarter listed poor customer relations (24 per cent) while training costs (20 per cent) and reduced productivity (20 per cent) are cited by nearly equal numbers of employers. Reduction in sales (19 per cent) and human resources costs (15 per cent) are also seen as slightly less important implications while one in ten (11 per cent) employers cited poor internal communications. Financial costs of errors (6 per cent) also registers on the list, but is cited by a small number of employers.

Cost/Implications of Low Skills [Unprompted]

"From what your organization has experienced with employees in the past, what are the greatest costs or implications for the organization when employees' "Essential Skills" are not up to your requirements?"

- Employers in the Prairies (32 per cent) are much more likely than average to say that poor customer relations would be the top cost implication of not having employees' Essential Skills be up to par. Employers in Alberta (24 per cent) and Ontario (25 per cent) are slightly more likely than average to say that training costs would be the top implication while employers in Quebec (24 per cent) and Alberta (24 per cent) are more likely to cite a reduction in sales.
- As might be expected, employers in the private sector are twice as likely as their public sector counterparts to cite a reduction in sales as being the top implication. Public sector employers, however, are more likely to see a reduction in productivity as the top implication.
- Employers with multiple locations are more likely than those with only one location to cite poor customer relations as the top implication.

- Employers in the social services and scientific/technical sectors are significantly more likely to cite poor customer relations while those in the primary industries cite reduced productivity. Employers in the service industry are more likely to say that training costs would be the greatest implication.
- Employers in unionized organizations are twice as likely as those in non-unionized organizations to say that a reduction in sales would be the greatest implication.

Employers were then presented with a list of possible implications that might affect their organization if their employees' "Essential Skills" were deficient. For each item tested, a majority of employers said their organization would be adversely affected. Not being able to keep up with technology and the inability to diversify were, however, cited by fewer employers as possible implications but are still at the majority level.

Cost/Implications of Low Skills [Prompted]

"Would your organization suffer from any of the following if your employees' "Essential Skills" were deficient?"

- Employers in Ontario are significantly more likely than average to say that each of the items on the list would be adversely affected by a deficiency in employees' Essential Skills. Quebecois employers, however, rate each item on the list lower than average. Employers in the Prairies are significantly more likely than those in other regions to be concerned about lower productivity (96 per cent).
- Private sector employers are much more likely than their public sector counterparts to cite lower profitability, a lack of employee confidence and the inability to diversify as possible implications.

- Organizations with multiple locations are more likely than those with only one location to cite each item tested as an implication of a deficiency in employees' "Essential Skills".
- Employers who place a high priority on training are more likely than those who do not to say that their organization would suffer from each implication on the list.

When asked about the greatest benefits for an organization when employees' Essential Skills are good or excellent, 35 per cent each cited improved productivity, customer relations and increased sales/revenue. Two in ten (19 per cent) said that the work environment would be improved and 15 per cent said that internal operations would be most positively affected. One in ten employers (12 per cent) believes that the organization would have better quality staff if they were trained in Essential Skills.

Greatest Benefits of Good Essential Skills

"From what your organization has experienced with employees in the past, what are the greatest benefits for the organization when employees' essential skills are good or excellent?"

- Regionally, improved productivity is more likely to be seen as the greatest benefit by employers in the Atlantic region. Employers in the Prairies are much more likely to cite customer relations (48 per cent). Increased sales/revenue is more likely to be seen as a benefit by employers in Alberta (47 per cent) and the Atlantic region (46 per cent).
- As might be expected, employers in the private sector (particularly those in organizations with multiple locations) are more likely to value increased sales/revenue while those in the public sector are more likely to value customer relations. Private sector employers are twice as likely as those in the public sector to cite internal operations as receiving the greatest benefit from good Essential Skills.

- Employers in the construction industry are more likely to say that improved productivity would be the greatest benefit to their organization while increased sales/revenue is cited by those in the retail trade. Employers working in social services and scientific/technical areas are twice as likely as average to cite better quality staff as a benefit.

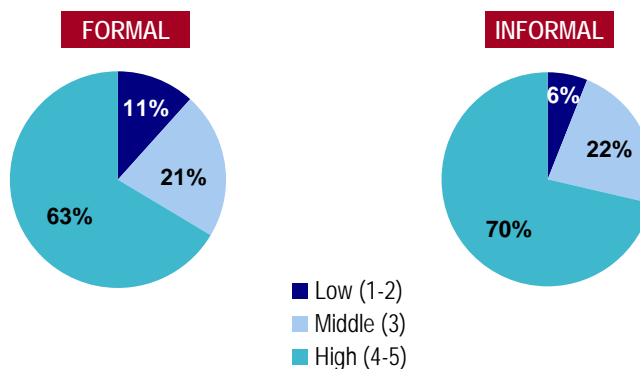

3. PROFILE OF ESSENTIAL SKILLS TRAINING

3.1 TYPES AND EXTENT OF TRAINING

In order to gauge the priority that organizations place on formal vs. informal training methods, employers were asked to rate the levels of priority placed on these types of training in their own organization. Informal training (70 per cent) is rated as a high priority by more organizations than formal (63 per cent) training, although majorities of employers rate both as being a high priority.

Priority for Essential Skills Training

“Thinking about any formal/informal development and training that your own organization does with its employees, what level of priority is placed on formal/informal training in Essential Skills in particular?”

EKOS Research Associates Inc.

n=1501

Essential Skills in Canadian Workplaces, 2007

- Regionally, informal training in “Essential Skills” is more prevalent in the Prairies (78 per cent) and Ontario (78 per cent).
- Formal training in “Essential Skills” is a higher priority for private sector companies and those with multiple locations across Canada.
- Informal training also receives a higher priority rating among employers in the private sector than those in the public sector.

- Those in the financial industry are more likely to place a high priority on formal training while those working in social services and scientific/technical areas place a higher priority on informal training.
- Employers in unionized organizations place a higher priority than those in non-unionized organizations on both formal and informal methods of training.

For each of the nine Essential Skills, employers were asked to indicate the proportion of employees who received training in the past year.

Employees have received the largest amount of training in their ability to work with others with one-third of employers (32 per cent) saying that all of their employees have been trained in this area. One-quarter of employers (26 per cent) say that all of their employees have received training in oral communication while two in ten (22 per cent) say that all of their employees have received training in thinking skills.

The fewest employees in Canada receive training in reading text, numeracy/math and writing. Large majorities of employers in each case say their employees have received no training in these areas.

Types and Extent of Training Provided

“About how many employees received training in ... in the last year?”

- Regionally, the number of employers who say that all of their employees receive training in working with others is significantly higher in BC (43 per cent) and lower in Atlantic Canada (13 per cent). Atlantic employers also cite lower levels of training in oral communication with 15 per cent saying all employees receive this training.
- Overall, employees in organizations with only one location across Canada receive lower levels of training in oral communication, using documents and reading text.
- Employees in the private sector receive notably higher levels of training in working with others, using documents and thinking skills. In fact, private sector employers are three times as likely as their public sector counterparts to say that all employees received training in thinking skills.
- Those in the retail trade are more likely to say that all of their employees received training in working with others while employers in both the retail and service industries say that all of their employees have received training in oral communication.
- Non-unionized employers and those who place a high priority on training are more likely to say that all of their employees have received training in oral communications, working with others and thinking skills.

3.2 RATIONALE

Improving productivity (42 per cent) is the top reason that organizations provide Essential Skills training to their employees. Slightly smaller numbers of employers say that they provide training to increase client satisfaction (29 per cent) or to improve profitability (24 per cent). Slightly less than two in ten (17 per cent) cite the need to keep current with advances in technology as the main reason while 14 per cent say that dissatisfaction on the part of the employer is the reason for this training. All other responses are provided by less than one in ten employers.

Rationale for Training

“What was the main reason that your organization provide Essential Skills training to employees?”

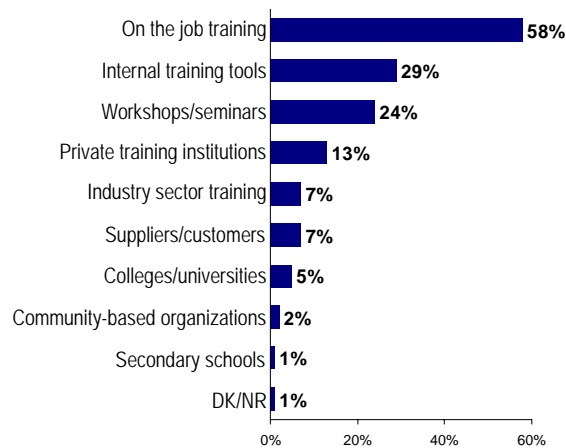

- There is some notable regional variation in Quebec and Alberta. Employers located in Quebec are more likely to say that the need to stay current with technology (33 per cent) and improving profitability (41 per cent) are the main motivations for this training. Interestingly, employers in Quebec (29 per cent) are three times more likely than average to say that this training is motivated by interest on the part of employees. Employers in Alberta are much more likely to cite employee satisfaction (13 per cent) and health and safety reasons (19 per cent) as their top motivation for this training.
- Employers in the public sector are significantly more likely than those in the private sector to say that this training is initiated by employee interest.
- Employers in organizations with multiple locations are more likely to say that this training is meant to improve profitability and keep current with technology.

3.3 METHOD

A majority of employers (58 per cent) say that on-the-job training is the top method of delivering Essential Skills training. Three in ten employers (29 per cent) say that their organization favours internal training tools. One-quarter of employers cite workshops and seminars (24 per cent) as the top method of delivering this training, while 13 per cent say that employees are trained at private training institutions. All other responses are given by fewer than ten per cent of employers.

Method of Delivery of Training

“What was the most frequently used method of delivering the Essential Skills training that you have just told me about?”

EKOS Research
Associates Inc.

n=1328

Essential Skills in Canadian Workplaces, 2007

- Regionally, internal training tools are favoured by employers in BC (40 per cent) while employers in Alberta are much more likely than average to say that their employees receive on the job training (68 per cent). Interestingly, employers in Quebec are much more likely to say that this training is delivered through private training institutions (21 per cent) or workshops/seminars (33 per cent) and are nearly three times as likely as average to say that they receive industry sector training (19 per cent).
- On-the-job training is clearly favoured by private sector organizations when compared to those in the public sector. Employers in the public sector are much more likely to cite all other forms of training (with the exception of secondary school and college/university training which receive low marks across the board).
- Organizations with one location in Canada are more likely to provide on the job training in Essential Skills, while those with multiple locations are nearly twice as likely to use internal training tools.

- On the job training is more prevalent in the service industry and is more frequently used by non-unionized employers. Workshops/seminars are more frequently used by employers working in social services and scientific/technical areas.

3.4 IMPACTS/BENEFITS

Employers were also asked to indicate which outcomes of the Essential Skills training were measured. Almost equal majorities of employers say that the outcomes were measured in terms of employee satisfaction (65 per cent) and performance (65 per cent), client satisfaction (64 per cent) and performance of the organization as a whole (64 per cent). A slightly smaller number of employers (although still a majority) say that workplace safety was measured (53 per cent) while three in ten say that there was a formal assessment (28 per cent).

Methods of Evaluation of Training

“Were the outcomes of Essential Skills training measured in any of the following ways?”

 EKOS Research
Associates Inc.

n=1328

Essential Skills in Canadian Workplaces, 2007

- Looking at the results regionally, Alberta employers are more likely than average to say that the outcomes were measured for each of the possible options.
- Employers in organizations with multiple locations are more likely than those with only one location to say that there was a formal assessment or that employee satisfaction was measured. Employee and organizational performance are more likely to have been measured in organizations with one location.
- Employee performance and workplace safety were measured to a larger degree among private, rather than public, sector organizations.

- Construction and manufacturing organizations are both more likely to undertake formal assessments and to assess workplace safety.
- Perhaps oddly, employee satisfaction is much more likely to be assessed by employers that are not familiar with Essential Skills.

3.5 BARRIERS

Employers who work for organizations that did not offer training were asked why their organization did not offer any Essential Skills training to its employees. Two in ten (21 per cent) indicated that Essential Skills are a requirement of the job. Almost equal numbers of employees say either that employees' skills are adequate (16 per cent) or that skills are not required (18 per cent). Slightly more than two in ten say that the organization can not free up their employees for training (12 per cent). One in ten (11 per cent) points to a lack of resources, fewer say that the organization is unsure of what is required (seven per cent) or that their employees show no interest (five per cent).

Barriers for Non Trainers

"Organizations choose not to conduct training for a variety of reasons. What was the primary reason that your organization did not offer any training in Essential Skills to employees?"

A large majority of employers in these organizations (83 per cent) also indicated that it is not likely that their organization would offer training to employees in the next 12 months. Slightly more than one in ten (11 per cent) believe that their organization would be offering this training in the future.

Plans for Future Training

“As far as you know, does your organization currently have plans to offer Essential Skills training to employees in the next 12 months?”

Lack of time is the single greatest barrier to an organization's furthering the development of Essential Skills in their organization (19 per cent). Slightly smaller numbers of employers indicated that their employees already have the skills (15 per cent) or that employees are resistant to developing skills (14 per cent). One in ten employers (11 per cent) said that cost is the main barrier. Eleven per cent of employers reported no barriers to the development of Essential Skills. All other response options receive less than ten per cent of mentions.

Barriers to Essential Skills Training

"If any barriers exist, what is the single greatest barrier in your organization to furthering the development of employee Essential Skills?"

EKOS Research
Associates Inc.

n=1501

Essential Skills in Canadian Workplaces, 2007

- Regionally, employers in Ontario (24 per cent) and those in Alberta (23 per cent) are more likely to say that there is no time to take training. Employers in Quebec are nearly twice as likely as average to say that their employees already have the skills (28 per cent) but are also more than twice as likely as average to point to high turnover rates (12 per cent) as the main barrier. Employers in Atlantic Canada are more than twice as likely to cite the cost of training (25 per cent) as the main barrier.
- Private sector employers are more than twice as likely as those in the public sector to cite resistance on the part of employees while those in the public sector are much more likely to say the cost is the main barrier. Notably, public sector employers are more than four times as likely as those in the private sector to say that high employee turnover is the number one barrier.
- Employers working in retail are more likely to cite the fact that employees already have the skills as being the greatest barrier. Employers in unionized organizations are more likely than those in non-union organizations to say that employees are resistant.

- Interestingly, employers who place a high priority on training are also more likely to cite the lack of time as the greatest barrier.

3.6 TRAINING AMONG SPECIFIED GROUPS

Seven in ten employers across Canada reported that their organization has youth employees (69 per cent). Slightly less than one-quarter has recent immigrant employees (23 per cent) and two in ten have Aboriginal employees (19 per cent).

Eight in ten of those employers with youth employees (80 per cent) said that youth receive Essential Skills training. A slightly smaller number of those with recent immigrants among their employees said that they received training (74 per cent). Although still a majority, significantly fewer employers with Aboriginal employees said that they received training (62 per cent).

- Regionally, BC employers (43 per cent) are more than twice as likely as the average to say that their organization employs Aboriginal people. Youth employees are much more prevalent in Quebec (83 per cent).
- The tendency to have youth employees or employees who are recent immigrants increases with the size of the organization.

- Public sector employers are more than twice as likely to say that their organization employs Aboriginal people.
- Employers in the service industry and those in unionized organizations are more likely to have both youth and recent immigrant employees. Aboriginal employees are more prevalent in the primary industries.

APPENDIX A
QUESTIONNAIRES
(ENGLISH AND FRENCH)

Hello, my name is ___ with EKOS Research Associates. We are conducting a survey of organizations on behalf of the Human Resources and Social Development Canada on issues related to employee skills and training. Your participation is completely voluntary and your decision to participate or not will not affect any dealings you may have with the federal Government. The information you provide is being collected under the authority of the Department of Human Resources and Skills Development Act in accordance with the Privacy Act and other applicable privacy laws. The names of respondents will not be provided to the government or any other party, and the name of your organization will not be reported in any of the findings. Also, the government will receive the study findings in the form of a report, which will contain non-identifying aggregate information. The survey will take about 15 minutes to complete. Is now a good time for us to begin?

34:

Q7P

The Government of Canada has developed a list of what they consider to be Essential Skills. By this, they are referring to a set of transferable skills common across most occupations and used in daily life. In order for your workplace to be successful, how important is it that the employees across the <LOCAT > have each of the nine skills that the Government has classified as Essential. I'll read the list and ask you to please respond using a five-point scale where 1 is not at all important and 5 is extremely important.

1 - End of the interview
 @info2

Bonjour, je m'appelle ___ et je travaille pour Les Associés de recherche EKOS.

Nous effectuons pour le compte de Ressources humaines et Développement social Canada un sondage auprès d'organisations au sujet des enjeux liés aux compétences et à la formation des employés. Vous êtes tout à fait libre de participer ou non à l'étude, et votre décision à cet effet n'aura pas d'incidence sur vos éventuelles relations avec le gouvernement fédéral. Les renseignements sont recueillis en vertu de la Loi sur le ministère des Ressources humaines et du Développement des compétences, conformément à la Loi sur la protection des renseignements personnels et aux autres lois de même nature. Nous ne communiquerons pas les noms des répondants au gouvernement ou à un tiers parti, et le nom de votre organisation ne sera pas divulgué dans les résultats découlant de la présente étude. De plus, nous ne transmettrons les résultats au gouvernement que dans le cadre d'un rapport, qui présentera des renseignements globaux qui ne permettront pas de reconnaître les participants. Il faut compter une quinzaine de minutes pour répondre au sondage. Est-ce que c'est un bon moment pour que nous commençons?

@intro (1-Continuer, SHIFT + ? achever)

27: **Q1**

En premier lieu, est-ce que votre organisation compte plus d'un lieu de travail au Canada, ou s'agit-il de votre seul emplacement?

34:

Q7P

Le gouvernement du Canada a dressé une liste de ce qu'il considère être les compétences essentielles. On entend par "compétences essentielles" un ensemble de compétences transférables et communes dans la plupart des professions ainsi que dans la vie quotidienne. Dans quelle mesure est-il important, pour le succès

de votre lieu de travail, que les membres du personnel de votre <LOCAT >

possèdent chacune des neuf compétences que le gouvernement considère comme essentielles? Je vais vous lire la liste en vous demandant de répondre au moyen d'une échelle de cinq points, où 1 signifie pas important du tout et 5, extrêmement important.

-----------	--------------------------------------

Les organisations décident de ne pas offrir de formation pour diverses raisons. Quel était le principal motif pour lequel votre <locat > n'a pas offert de formation aux employés au sujet des compétences essentielles?

- Ces compétences ne sont pas indispensables pour l'emploi..... 111
- Manque d'intérêt des employés 112
- Manque de ressources pour payer/assurer la disponibilité des formateurs 113
- Manque de ressources pour libérer les employés de leurs fonctions afin qu'ils participent à la formation 114
- Incertitude quant à la formation nécessaire/où se tourner pour obtenir la formation 115
- Des compétences suffisantes sont exigées à l'embauche (c.-à-d. qu'il faut les avoir pour être engagé) 116
- Autre (veuillez préciser) 977 O
- Ne sais pas/Pas de réponse 999 X
